IM. STANISŁAWA STASZICA W KRAKOWIE

Zbigniew HANZELKA

Jakość energii elektrycznej w zakładach górniczych i ich otoczeniu

Gliwice, wrzesień 2011

Przykłady najczęściej rozważanych zaburzeń elektromagnetycznych

zapad napięcia

krótka przerwa w zasilaniu

wahania napięcia

wzrost napięcia

odkształcenie przebiegu czasowego

asymetria

zaburzenie impulsowe

zaburzenie oscylacyjne

załamania komutacyjne napięcia

Program

1. Kopalnia jako źródło własnych stanów awaryjnych
2. Złe warunki zasilania przyczyną awarii w sieci kopalnianej
3. Odbiory kopalni źródłem zakłóceń u innych odbiorców

Kopalnia jako
źródło własnych
stanów
awaryjnych

ŚRODOWISKO ZEWNĘTRZNE

Niezmodulowane napięcie

Złe warunki
zasilania
przyczyną awarii
w sieci kopalnianej

ŚRODOWISKO ZEWNĘTRZNE

Elektrociepłownia

- **wyłączenie wentylatorów**
- **zatrzymanie maszyny wyciągowej 1 i wyciągowej skipowej 2**
- **wyłączenie pomp w pompowni głównej i rejonowej**
- **niemożliwość rozruchu silników napędzających wentylatory (ciężki rozruch)**
- **problemy z pracą maszyny wyciągowej**
- **wyłączenie generatora EC-1 (nieprzystosowanie do pracy wyspowej)**

"1" - otwarty - prawidłowe działanie
"0" - zamknięty - działanie nieprawidłowe

"1" - otwarty - prawidłowe działanie
"0" - zamknięty - działanie nieprawidłowe
